

PROCESSING STEPS AND BUSINESS QUESTIONS BY BHUVANA MUPPIDI

EMAIL ID : muppidibhuvana.24.csd@anits.edu.in

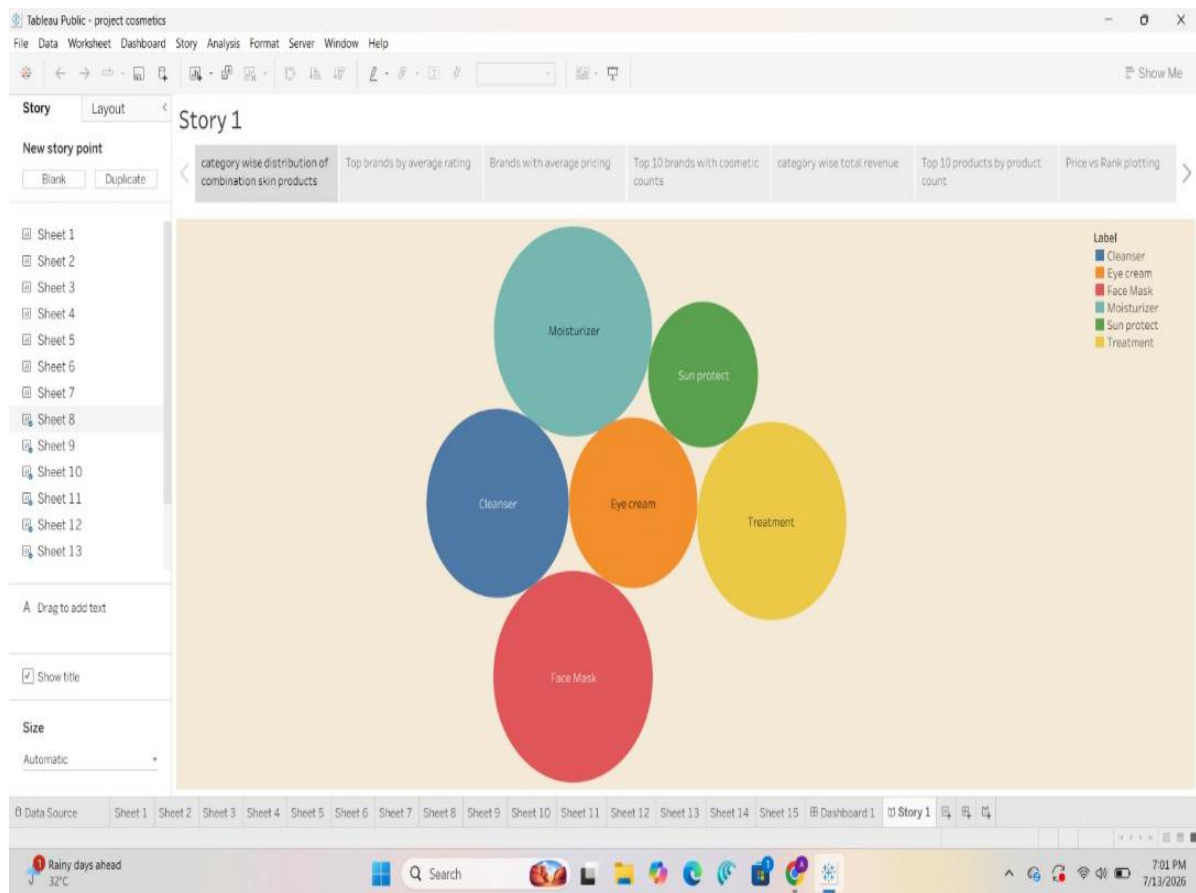

I CREATED A DASHBOARD THE PREPROCESSING STEPS INCLUDE :-
dataset

- 1.I first downloaded the Cosmetics Products CSV dataset from a reliable source.
- 2.The dataset contained over 4,000 product records with multiple attributes such as Brand, Product Name, Category, Price, Rating, Skin Type, and Ingredients. I checked the for missing values and duplicate records.
- 3.I selected the required columns such as Brand, Product Name, Category (Label), Price, Rank, Skin Type, and Ingredients to perform data analysis and generate meaningful business insights.
- 4.I removed duplicate records, corrected data types where required, cleaned the dataset, and imported the final CSV into Tableau Public to create interactive dashboards and stories.

Questions :

1. Which cosmetic category contains the highest number of products?

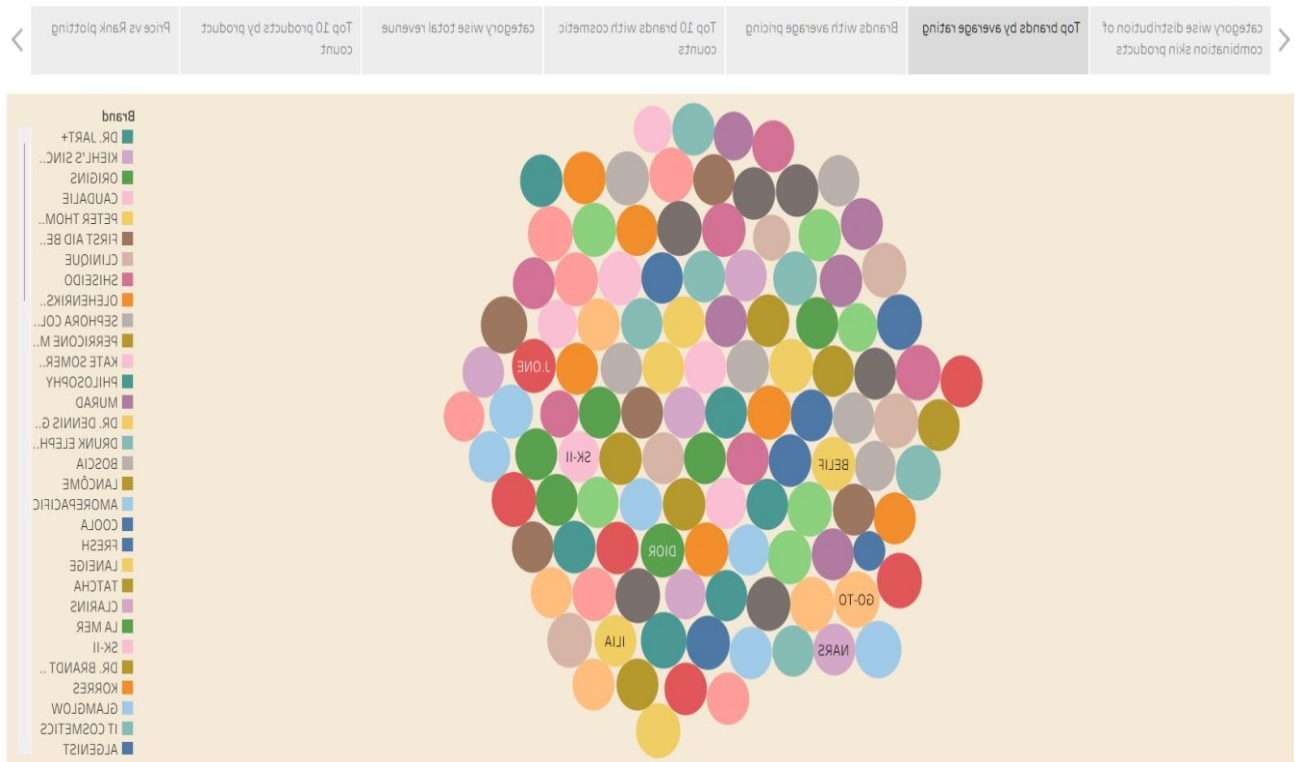

Insert Bubble Chart
